Novel peptide comprising acetyl COA carboxylase (ACCase) having deleted biotin binding domain and carboxy transferase domain, and having functional biotin carboxylase domain, useful for identifying ACCase inhibitors/activators. Novel

Claim 8; SEQ ID NO 2; 56pp; English

The invention relates to a novel peptide (I) comprising an acetyl CoA carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxy transferase domain, and having a functional biotin carboxylase domain. A peptide of the invention is useful for identifying Acetyl CoA carboxylase inhibitors or activators, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, determining whether or not the compound binds to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding compound in 

us-10-633-835-2.rag

```
activity, and selecting a compound that inhibits or activates Acetyl Coacarboxylase activity. A peptide of the invention is also useful for identifying fungicides, which involves combining the peptide and a compound to be tested for the ability to bind to the bictin carboxylase domain, under conditions that permit binding to the bictin carboxylase domain, determining whether or not the compound binds to the biotin carboxylase arboxylase domain, the presence of binding indicating the compound is or may be fungicide, employing the identified compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound that inhibits Acetyl CoA carboxylase activity, The present sequence represents an ACCase BC domain of the invention.

Phaffia rhodozyma acetyl-CoA carboxylase

antioxidant Acetyl-CoA carboxylase; enzyme; astaxanthin; pigment;

Xanthophyllomyces dendrorhous.

364

The present sequence is the protein sequence of the acetyl-CoA carboxylase (ACC) gene of Phaffia rhodozyma (ATCC 74438). The sequence shows 56.284 mainto acid sequence identity to a known ACC from Emericella nidulans. ACC is an enzyme involved in fatty acid biosynthesis. Its substrate is acetyl-CoA, which is also involved in the carotenogenic pathway of P. rhodozyma. A claimed method for producing ACC comprises culturing a recombinant organism containing a vector comprising an ACC polynucleotide. Also claimed is a resombinant organism in which gene expression of ACC is reduced as a result of antisense technology, site-directed mutagenesis, error-prone PCR or dentical mutagenesis. The recombinant organism is preferably P. rhodozyma or Xanthoppylomyces dendirorhous containing a vector comprising an antisense polynucleotide. It is used in a claimed process for producing carotenoids such as astaxanthin, beta-carotene, lycopene, zeaxanthin and canthaxanthin. The method is useful for increasing microbial production of carotenoids such as a staxanthin, which has antioxidant properties and is used as a second as a setaxanthin, which has antioxidant properties and is used as a New acetyl-CoA carboxylase polynucleotide derived from Phaffia rhodozyma or Xanthophylomyces dendrorhous, useful for producing a recombinant vector or for increasing microbial production of carotenoids. Claim 1; SEQ ID NO 3; 82pp; English × Setoguchi 25-SEP-2003; 2003WO-EP010683 27-SEP-2002; 2002EP-00021625 WPI; 2004-329883/30. N-PSDB; ADN10914, ADN10915. It was deduced from a 8123 bp DNA sequence isolated from an ECARI genomic library by screening with a fragment of the Saccharomyces cerevisiae ACoACase gene. The amino acid aguence has 63 % identity and 77 % similarity to the yeast enzyme; it also has 47 % identity (ACA % similarity) with the ACOACase proteins from rat and chicken. ACOACase activity is the preferred target biochemical activity in a new screening system. (Updated on 16-OCT-2003 to
                                                                                                                                                                                                                                                                                                               Acetyl coenzyme A carboxylase; ACOACase; powdery mildew; fungus; ACCase; fatty acid biosynthesis; EC 6.4.1.2.

carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxylase Gomain, and having a functional biotin carboxylase domain. A peptide of the invention is useful for identifying Acetyl CoA carboxylase inhibitors or activators, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA arboxylase inhibitor or activates.

The method further involves employing the identified binding compound in an assay to detect inhibition or enhancement of Acetyl CoA carboxylase carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity, A peptide of the invention is also useful for identifying fungicides, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, the presence of binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be fungicide, employing the identified compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound that inhibitis and a selecting a compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, The present sequence

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to promote for expression of a polymucleotide encoding a polypoptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant ecombinant DNA construct and growing the transforming a plant with the recombinant DNA construct is useful for improving plant with the polymucleotide or polypeptide is useful for producing plant with the polymucleotide or polypeptide is useful for producing plant with the recombinant DNA construct is useful for producing plant with the polymucleotides, extreme osmotic conditions, pathogens or pests, increased resistance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or phosphorus use and/or uptake, by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved lignin production or improved glant growth and development under at least one stress condition, improved lignin production or improved glant members a bacterial polypeptide used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a plant with the recombinant DNA construct and growing the transformed plant, where the complication dor polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with the improved plant properties, e.g. improved cold, heat or drought tolerance, collerance to herbicides, e.g. improved cold, heat or drought tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modification of carbohydrate, nitrogen or content, improved yield by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved plant growth and envelopment under at least one stress condition improved plant growth and envelopment under at least one stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                427
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            487
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                         New recombinant DNA construct comprising a promoter positioned to provifor expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CONTIDEETWIVITVDDDVYQXACIRSAEEGIAVAEKIGYPVMIKASEGGGGGGGIROVISTE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents acetyl CoA carboxylase (ACCase) isolated from Candida albicans. The C. albicans ACCase is used in an assay to identify inhibitors of the enzyme. This is useful in pharmaceutical research. Inhibitors of ACCase are useful as antifungal agents. The invention also provides a novel expression system using Saccharomyces cerevisiae to express the C. albicans ACCase gene in quantifiable amounts. Expression of the C. albicans ACCase gene in quantifiable amounts. Expression of the C. albicans ACCase gene in Guartification of the ACCase. Controlled overexpression is used to improve expression of the ACCase. It is possible to achieve about 14-fold overexpression relative to the wild-type host S. cerevisiae strain JK9-3D. This is achieved by replacing the C. albicans promoter in the expression construct by a stronger and preferably inducible promoter such as the S. cerevisiae GALI promoter

CC Acetyl CoA carboxylase inhibitors or activators, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, determining whether or not the compound binds to the biotin carboxylase domain, determining whether or not the compound binds compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding compound in an assay to detect inhibition or enhancement of Acetyl CoA carboxylase cortivity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity. A peptide of the invention is also useful for identifying fungicides, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or carboxylase domain, the presence of binding indicating the compound carboxylase activity, and selecting a compound that inhibition of Acetyl CoA carboxylase activity, and selecting a compound carboxylase activity. The present sequence that inhibits Acetyl CoA carboxylase activity. The present sequence

The invention relates to multiprotein complexes from eukaryotes. Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distainor proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the Buropean Patent Office. second protein, or its derivative, fragment, homologue or variant. The proteins are selected from given protein complexes, which are not defined in the protein second protein complexes, which are not defined to in the specification. The variants are encoded by nucleic acids that the proteins under low stringency conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for the presence of a disorder the amount, activity or protein components of the complex is useful for the manufacture of a medicament for the treatment or prevention of a disease or disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was

New crystallizable composition comprising a carboxyltransferase domain of acetyl-coenzyme A (COA) carboxylase, for treating e.g. diabetes, obesity, cardiovascular disease, atherosclerosis, or cancer.
                                                                                                                                                                                                                                                                                     The invention comprises a crystallisable composition containing a carboxyltransferase (CT) domain of acetyl-coenzyme A (acetyl-COA) carboxyltranse. The composition of the invention is useful for treating: metabolic syndrome, diabetes, obesity, cardiovascular disease, atherosclerosis, depression, cancer, hyperlipidaemia, dyslipidaemia, hypertension, hyperuricaemia and renal disfunction. The present amino acid sequence represents a yeast acetyl-CoA carboxylase of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ETFGDERAIEFTVMATPEDLKVNADYIRMADQYVEVPGGSNNNNYANVDLIVDVAERAGV 122

Claim 1; SEQ ID NO 1998; 122pp; English.

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polymuclectide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant the combinant DNA construct and growings the transformed plant with the recombinant DNA construct is useful for improving plant where the polymuclectide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with the improved plant properties, e.g. improved cold, heat or drought tolerance. The recombinant DNA construct assembly to producing plants with inproved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan condition, improved lignin production or improved galactomannan or production. This sequence represents a bacterial polypeptide used in the condition. patent did not scope of the invention. Note: The sequence data for this patent did no form part of the printed specification but was obtained in electronic format from USPTO at sequata.uspto.gov/sequence.html.

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a cransformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant comprising the recombinant DNA construct and growing the transforming a plant with the recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plant properties. The recombinant DNA construct is useful for improving plant properties. Colerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved plant showth and development of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved plant showth and development of photosynthesis or by production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form at norm at norm of the condition of the printed specification because obtained in electronic

targets in New proteins and protein complexes from eukaryotes, useful as targets drug screening, or in diagnosing or screening for the presence of a disease or disorder, or a predisposition for developing a disease or disorder in a subject

Disclosure; SEQ ID NO 2763; 13pp; English.

second protein, or its derivative, fragment, homologue or variant. The proteins are selected from given protein complexes, which are not defined in the specification. The variants are encoded by nucleic acids that. Thy pridize to the nucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active agent of a pharmaceutical. These protein complexes are particularly useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament for the treatment or prevention of a disease or disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for this petern did not form part of the printed specification but was The invention relates to novel protein complexes comprising a first and a EPO in electronic format)

The invention relates to a novel peptide (I) comprising an acetyl CoA carboxylase (AcCase) having a deleted biotin binding domain, having a dieleted carboxylase (arboxylase domain, and having a functional biotin carboxylase domain. A peptide of the invention is useful for identifying Acetyl CoA carboxylase inhibitors or activators, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding compound in a say to detect inhibition or enhancement of Acetyl CoA carboxylase (C) an assay to detect inhibition or enhancement of Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity. A peptide of the invention is also useful for identifying fungicides, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase commain, determining whether or not the compound binds to the biotin carboxylase domain, the presence of binding indicating the compound is or carboxylase domain, the presence of binding indicating the compound cin an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound that inhibits Acetyl CoA carboxylase activity, and selecting equence that inhibits Acetyl CoA carboxylase activity, and selecting equence of compound that inhibits Acetyl CoA carboxylase activity, and selecting equence of that inhibits Acetyl CoA carboxylase activity, and selecting equence of page activity, and selecting the present sequence of represents the human ACC1 BC domain.
                           eptide comprising acetyl CoA carboxylase (ACCase) having deleted binding domain and carboxy transferase domain, and having anal biotin carboxylase domain, useful for identifying ACCase
                                                                                                                                                                                              Claim 9; SEQ ID NO 10; 56pp; English.

The invention comprises a crystallisable composition containing a carboxyltransferase (CT) domain of acetyl-coenzyme A (acetyl-COA) carboxylase. The composition of the invention is useful for treating: metabolic syndrome, diabetes, obesity, cardiovascular disease, atherosclerosis, depression, cancer, hyperlipidaemia, dyalipidaemia, hyperunicaemia and renal disfunction. The present amino acid sequence represents a human acetyl-COA carboxylase of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           161
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           141

similar sequence from some other animal species), and a polypeptide that is a part of the accetyl coenzyme A-carboxylase alpha (ACC-alpha) protein able to bind the BRCAl protein. The complex is implicated in predisposition to cancer of breast and ovary. It is used to screen for compounds that modulate interaction between BRCAl and ACC-alpha, which are potentially useful for treatment, prevention and diagnosis of cancer, and to identify endogenous ligands. Modulated formation of the complex of an be used for diagnosis of cancer. Antibodies directed against specific parts of human ACC-alpha are useful for localization of the complex in cells

```
The present sequence is the protein sequence for human acetyl-Coenzyme A-carboxylase-alpha (ACC-alpha). This sequence can be used for in vitro diagnosis of cancer (or of an increased risk of developing it), by detecting ACC-alpha gene mutations or polymorphisms, or altered ACC-alpha protein expression, relative to a control population. The method is particularly used to diagnose cancer, especially of breast or ovary, or for assessing the risk of developing such cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a variant sequence for human acetyl-Coenzyme Acarboxylase-alpha (ACC-alpha). This sequence can be used for in vitro diagnosis of cancer (or of an increased risk of developing it), by detecting ACC-alpha gene muteations or polymorphisms, or altered ACC-alpha protein expression, relative to a control population. The method is particularly used to diagnose cancer, especially of breast or ovary, or for assessing the risk of developing such cancers. Note: The present sequence was not shown in the specification, but was derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       438

diagnosis of cancer (or of an increased risk of developing it), by detecting ACC-alpha gene mutations or polymorphisms, or altered ACC-alpha protein expression, relative to a control population. The method is particularly used to diagnose cancer, especially of breast or ovary, or for assessing the risk of developing such cancers. Note: The present sequence was not shown in the specification, but was derived from information given

In vitro diagnosis of cancer, particularly breast and ovarian susceptibility, comprises detecting alterations in the acetyl carboxylase alpha gene or protein expression.

27-SEP-2001

The present sequence is a variant sequence for human acetyl-Coenzyme A-carboxylase-alpha (ACC-alpha). This sequence can be used for in vitro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                582
                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176) and the encoded proteins (ABBS7737-ABR20772). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                     New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                            DYIRMADQYVEVPGGSNNNNYANVDLIVDVAERAGVHAVWAGWGHASENPRLPESLAASK

```

```
Lue present invention provides the protein and coding sequences of the Drosophila melanogaster acetyl CoA carboxylase enzyme (ACCase). The sequences can be used to identify insecticidal and acaricidal agents that act by modulating activity or expression of ACCase. The present sequence is the protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid encoding insect acetyl-coenzyme A carboxylase, useful for identifying insecticidal and acaricidal agents, also related proteins and modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 146

The invention relates to a novel nucleic acid (I) comprising (i) a 4047 bp sequence (ABN85738) or AAF59156; (ii) a segment with at least 14 bp from (i); (iii) a sequence that hybridizes to (i) or (ii) at 37-50c; (iv) a sequence at least 60% identical with (i) or (ii); (v) a complement of (i)-(iv) or (vi) an equivalent of (i)-(iv) within the degeneracy of the genetic code. (I) and the encoded polypeptide (II, ABB83866) having ACCase (acetyl-CoA carboxylase, EC 6.4.1.2) activity are used to identify insecticidal and acaricidal agents that eact by modulating activity or expression of ACCase, an essential enzyme for survival of insects. The present sequence is that of the Drosophila melanogaster ACCase of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    bovine acetyl coenzyme A carboxylase alpha gene (Accalpha), or its fragments, which are used to control expression of foreign genes. When the promoter (or the Accalpha structural gene) is replaced, at least in part, by a sequence that is altered by deletion or substitution, then expression of Accalpha in the milk gland is reduced and the milk produced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Acetyl-coenzyme A carboxylase-alpha; acetyl-coA carboxylase alpha; bovine; milk gland-specific promoter; Accalpha; milk production; sheep; goat; fat content; genotyping; lactation.

(by cattle, sheep or goats) has reduced fat content. Analysis of the polymorphic 933-966 region of (Accalpha) is useful for genotyping animals, producing a genotype that is directly correlated with Accalpha expression during lactation and with fat content of the milk. This makes it possible to generate populations of cattle that produce milk of high or low fat content by classical breeding methods. Accalpha is a lactation specific, inducible promoter for expressing foreign proteins in the milk and, when modified, results in milk of reduced fat content, which facilitates recovery of proteins. This sequence represents a fragment from bovine Accalpha which contains a fragment of exon 5A exon 6 and exon

ABP59211 standard; protein; 2458 557 LAV 559 10-MAY-2003 497 ABP59211; 773 RESULT 27 ABP5921 a ਨੇ 셤 ð The invention relates to novel diagnostic and therapeutic polymucleotides selected from one of the 2722 sequences defined in the specification. A polymucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polymucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated to with human molecules, e.g. cell proliferative disorders, endocrine autoimmune/inflammatory disorder, developmental disorders, or disorder, neurological disorders, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers, and for somatic or germline invention. Note: The sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm Gietzen D; 303 LKVNADYIRMADQYVEVPGGSNNNNYANVDLIVDVAERAGVHAVWAGWGHASENPRLPES 141 LAASKHKIIFIGPPGSAMRSLGDKISSTIVAQHADVPCMPWSGTGIKETMMSD---QG-F 197 New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or in gene mapping. 81 ASPVADFIRKQGGHSVITKVLICNNGIAAVKEIRSIRKWAYETFGDERAIEFTVMATPED Wright RJ, Bruns CM, Marjanovic MM, Shen F;

The present invention relates to novel human drug metabolising enzymes, DME-13 (ABP59210-ABP5922) and their coding sequences (ABZ81301-ABZ81313). The sequences are useful for diagnosing, treating or preventing disorders associated with aberrant expression of DME, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, paroxyman incutural haemoglobinuria, polycythaemia vera, psoriasis, paroxyman incutural haemoglobinuria, polycythaemia vera, psoriasis, paroxyman incutural haemoglobinuria, colycythaemia vera, psoriasis, paroxyman incutorine, eng. sereoporosis, thrombocytopenia or mental creatadrion), endocrine (e.g. osteoporosis, thrombocis, diabetes), eye disorders (e.g. glaucoma, keratitis), metabolic (e.g. hyperlipidaemia, cystic fibrosis), gastrointestinal disorders (e.g. hyperlipidaemia, cystic fibrosis), jastrointestinal disorders (e.g. hyperlipidaemia, outcimmune thyroiditis, contact dermatitis, Crohn's disease, auttoimmune thyroiditis, contact dermatitis, Crohn's disease, osteoarthritis, pancreatitis, Reter's syndrome, multiple sclerosis, osteoarthritis, pancreatitis, Reter's syndrome, multiple sclerosis, sloperen's syndrome, uveitis, irritable bowel syndrome, multiple sclerosis, osteoarthritis, pancreatitis, Reter's syndrome, rheumatoid arthritis, strongenous compounds on the expression of nucleic acid and amino acid sequences of DME. The polymucleotides encoding DME are useful correating transgenic animals to model human disease
                                                                                New drug metabolizing enzymes (DME) useful for diagnosing, treating preventing diseases or conditions associated with aberrant DME expression, e.g. cancer, AIDS, atherosclerosis, diabetes, glaucoma, hepatitis or osteoporosis.
                                                                                                                                                                                                                                     Claim 1; Page 149-155; 181pp; English.

WPI; 2003-058429/05. N-PSDB; ABS57545 Novel human secreted protein useful for treating, preventing or diagnosing cancer, hepatitis, psoriasis, asthma, diabetes mellitus, anemia, epilepsy, cataract, Alzheimer's disease.

Claim 56; Page 143-149; 188pp; English.

antiatreriosclerotic, antiatherosclerotic, hepatotropic, cytostatic, antiatherosclerotic, antiatherosclerotic, antiatherosclerotic, antiatherotic, antiatherotic, antiatherotic, antiatherotic, antiatherotic, antiatherotic, antiatherotic, antiatherotic, cardiant, hypotensive, anticonvulsant, nootropic, immunosuppressive, antiparkinsonian and ophthalmological activity. The polymucleotides and polypeptides of the invention can be used for diagnosing, treating or preventing cell proliferative disorder e.g. arteriosclerosis, atherosclerosis, cirthosis, hepatitis, cancer, autoimmune/inflammatory disorders e.g. acquired immunodeficiency syndrome This invention describes novel secreted proteins (SECP) which

Human NOV76a protein.

```
cataract, gonadal dysgenesis, Cushing, sporiasis, rheumatoid arthritis, multiple sclerosis, ulcerative colitis, psoriasis, rheumatoid arthritis, etc; cardiovascular disorder e.g. myocardial infarction, angina pectoris, hypertension, Raynaud's disease. myocardial infarction, angina pectoris, hypertension, Raynaud's disease, myocarditis, pericarditis, etc; neurological disorders e.g. epilepsy, Huntingron's disease, Parkinson's disease, Albahimer's disease, Parkinson's disease, Albahimer's disease, Parkinson's cataract, gonadal dysgenesis, Cushing's syndrome, etc. The products of the invention can also be used for drug screening, proteome analysis, microarrays creating knock-in humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting differences in the chromosomal location due to translocation, inversion, etc., among normal, carrier or affected individuals, and as hybridization probes for mapping naturally occurring genomic sequences. ABB84649-ABB84673.

Crepresent secreted proteins encoded by the cDNA's shown in ABS57545-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                LAASKHKIIFIGPPGSAMRSLGDKISSTIVAQHADVPCMPWSGTGIKETMMSD---QG-F 197

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7;
                                                                                                                                                                                                                                                                                                                                                                                             cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypotrension, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABU65041-ABU65218 represent the NOVX polypeptides encoded by

New NOVX polypeptides and nucleic acid molecules useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. cancer, diabetes, infection or obesity, and in chromosome mapping, tissue typing or pharmacogenomics

Claim 1; SEQ ID NO 218; 786pp; English.

The invention relates to an isolated polypeptide (designated NOVX, or NOV1-NOV127) comprising a sequence selected from 178 fully defined amino acid sequences (and their mature forms, variants and fragments). Also

```
included are an isolated nucleic acid molecule encoding NOVX, a vector comprising the nucleic acid, a cell comprising the vector, methods for determining the presence or amount of the polypeptide or the nucleic acid molecule in a sample, methods for determining the presence of or predisposition to a disease associated with altered levels of expression of the above polypeptide or nucleic acid molecule in a first manmalian cubject, a method for identifying an agent that binds to the above polypeptide or nucleic acid molecule in a first manmalian subject, a method for identifying a potential therapeutic agent for cupe in the treatment of a pathology that is related to abbrrant care applyable or a modulator of activity or of latency or predisposition to screening for a modulator of activity or of latency or predisposition to a pathology associated with the polypeptide and a method for modulating the activity of the polypeptide cited above. The composition and methods are useful for diagnosing, preventing or treating diseases such as a pathology, associated diseases, observative diseases, anorez-associated cachexia, cancer, neurodegenerative disorders like Alzheimer's disease or Parkinson's disease, immune disorders, heamacopoietic disorders, chromosome mapping, tissue typing, preventive medicine and chromosome mapping, tissue typing, preventive medicine and chromosome mapping, the polypeptides are also useful as vaccines. The present sequence represents a NOVX protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  353

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.

                                                                                                                                                                                                   à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel peptide (I) comprising an acetyl CoA carboxylase (ACCase) having a deleted biotin binding domain, having a deleted carboxylase (arboxylase domain, and having a functional blocin carboxylase domain. A peptide of the invention is useful for identifying Acetyl CoA carboxylase inhibitors or activators, which involves combining the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding indicating the compound is or assay to detect inhibition or enhancement of Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity. A peptide of the invention is also useful for carboxylase activity, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase compound binds to the biotin carboxylase compound binds to the biotin carboxylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           carboxylase domain, the presence of binding indicating the compound is or may be fungicide, employing the identified compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound that inhibits Acetyl CoA carboxylase activity. The present sequence represents the human ACC2 BC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LKVNADYIRMADQYVEVPGGSNNNNYANVDLIVDVAERAGVHAVWAGWGHASENPRLPES 141

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    712
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               556
                                                                                                                                                             The invention comprises a crystallisable composition containing a carboxyltransferase (CT) domain of acetyl-coenzyme A (acetyl-COA) carboxylase. The composition of the invention is useful for treating: metabolic syndrome, diabetes, obesity, cardiovascular disease, atherosclerosis, depression, cancer, hyperlipidaemia, dyslipidaemia, hypertension, hyperuricaemia and renal disfunction. The present amino acid sequence represents a human acetyl-COA carboxylase of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         771

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual saltered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic sold molecule comprising at least a contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequence given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antigon-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about is antigon-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about is and 1000 nucleotides in Ength, a kit for detecting an SNP in a nucleic acid molecule, a method of detecting an SNP in a nucleic acid molecule, a method of detecting an surfaction. The novel detecting a variant polypeptide; and an encydence method for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method is seful in identifying an individual who has a increased or
                                         Human myocardial infarction-associated gene derived protein, SEQ ID 1170.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         associated gene containing one or more SNP's of the invention. Note: Thi sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.

302
involves administering a compound to a non-human animal, isolated tissue or cell having reduced expression of functional multi-adaptor protein Cbl, and determining the activity of acetyl CoA carboxylase (ACC) and/or amount of phosphorylated ACC enzyme in the animal, tissue or cell. The method is useful for identifying a compound that enhances or reduces whole body insulin sensitivity of an animal, and for preparing a composition for the treatment of obesity, diabetes, atherosclerosis and heart disease. The present amino acid sequence represents a human ACC2
                                                                                                                                                                                                                                                                             141

```
The invention relates to a novel peptide (I) comprising an acetyl CoA carboxylase (AcCase) having a deleted biotin binding domain, having a clasted carboxylase domain, and having a functional biotin carboxylase domain. A peptide of the invention is useful for identifying Acetyl CoA carboxylase inhibitors or activators, which involves combining the peptide and a compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibitor or activator. The method further involves employing the identified binding compound in carboxylase domain, the presence of binding indicating the compound is or may be an Acetyl CoA carboxylase inhibition or enhancement of Acetyl CoA carboxylase activity, and selecting a compound that inhibits or activates Acetyl CoA carboxylase activity. A peptide of the invention is also useful for carboxylase activity to binding to biotin carboxylase compound to be tested for the ability to bind to the biotin carboxylase domain, under conditions that permit binding to the biotin carboxylase domain, the presence of binding indicating the compound is or arboxylase domain, the presence of binding indicating the compound is or arboxylase domain, the presence of binding indicating the compound is or arboxylase domain, the presence of binding indicating the compound is or arboxylase domain, the presence of binding indicating the compound is or arboxylase domain, the presence of binding indicating the compound is or arboxylase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 may be fungicide, employing the identified compound in an assay to detect inhibition of Acetyl CoA carboxylase activity, and selecting a compound that inhibits Acetyl CoA carboxylase activity. The present sequence represents an ACCase BC domain of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NPRLPESLAASKHKIIFIGPPGSAMRSLGDKISSTIVAQHADVPCMPWSGTGIKETMMSD 194

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of nucleotide sequences given in the specification in the individual's nucleotide sequence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention altered risk for myocardial infarction in the individual. The invention altered risk for myocardial infarction in the individual. The invention altered risk for myocardial infarction in the individual. The invention the specification or its complement and encoding any one of the amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding comprising an amino acid sequence given in the specification; an antibody that specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polymucleotide, a buffer and an enzyme; a method of detecting an SNP in a mucleic acid molecule; a method of detecting or preventing comprising in method for identifying an agent useful in treating or preventing an amount in the moule of method for identifying an agent useful in treating or preventing an contraction. The novel detection method has cardiant activity.

method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction associated gene containing one or more SNF's of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO, website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      LTVSDDVYQQACIHTAEEGLEKAEKIGYPVMIKASEGGGGKGIRKCTNGEEFKQLYNAVL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                          The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide to aberrant expression or physiological interactions of the polypeptide with a proteins the proteins are useful for producing the proteins. The proteins the proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and simulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU3304 represent the amino acid sequences of novel human expression and the invention

ACC is end product regulated and is also the limiting enzyme in de novo fatty acid biosynthesis. A changed enzyme can interfere with both the lipid and fatty acid metabolism in plants. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                             g
```

The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using-suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as

Ä
